SUMMARY

React Developer with 5+ years of experience designing and delivering scalable, production-grade frontend applications using React.js, TypeScript, and Redux. Proven track record of building reusable component libraries, optimizing performance across large, cross-functional and offshore teams in Agile environments. Comfortable owning frontend architecture end-to-end, mentoring peers, and collaborating with backend teams on Java/Node-based services.

Technical SKILLS

Languages: HTML5, CSS3, JavaScript, ES6+, TypeScript

Front-End: React.js, Redux, Next.js, Redux-Toolkit, Thunk, TanStack Query, React-hooks, Material UI, Tailwind CSS, Context API, DOM, babel, webpack, debugging, WebSocket

Back-End: Familiar with Node.js, Express, MongoDB, REST APIs, JWT Authentication

Platforms/Tools Vite, Git, GitHub, JIRA, Figma, Postman, Swagger UI, VS Code, Cursor IDE, React DevTools , Webpack, Babel, CI/CD pipeline, npm, accessibility, Agile/Scrum, AWS, Docker, Kubernetes

AI-assisted-Development: GitHub Copilot, Claude, Cursor AI, Prompt Engineering.

EDUCATION

Bachelor of Engineering, Computer Science: UIT- RGPV, Bhopal, MP | 2016–2020 | CGPA 7.02
Higher Secondary (12th): School for Excellence, Bhopal, MP | 2015–2016 | 94.2%
High School (10th): Naveen School, Bhopal | 2013–2014 | 92.16%

EXPERIENCE

Software Engineer **JAVA R&D Pvt. Ltd., Bhopal, MP** **15 Oct 2020 – 14 Aug 2026**.

(Internal company transition to JAVA Ventures International Pvt. Ltd. — July 2025*)*

- Built reusable React.js components for tables, forms, filters, modals, dashboards, reduced development time by 30%.
- Optimized front-end performance by identifying and fixing bottlenecks, cutting page load times by 40%.
- Integrated RESTful APIs using Axios/Fetch to display dynamic data, improving responsiveness and overall user experience.
- Developed a scalable admin panel for managing users, reports, and application data, with JWT authentication, protected routes, and role-based access control.
- Built real-time messaging features using Socket.IO, with Redux Toolkit managing live socket-driven state and a responsive React UI.
- Implemented state management with Redux Toolkit (thunk) and adopted TanStack Query for server-state handling and caching in hooks-based workflows.
- Integrated RESTful APIs using Axios/Fetch to render dynamic data, improving responsiveness and user experience.
- Collaborated with cross-functional and offshore teams during EST hours to ship features and resolve production issues while maintaining sprint velocity.
- Leveraged GitHub Copilot and Generative AI tools (prompt engineering) to accelerate component development and improve code quality.

PROJECTS

Korn Ferry: - Human Resources & Talent Management

- Developed and maintained React.js components for the Participant Integration Grid to display and manage assessment scores across different assessment methods.
- Integrated REST APIs to fetch and display participant details, project information, assessment ratings, and grid configuration data.
- Implemented conditional score editing based on user permissions, assessment configuration, and locked assessment status.
- Investigated and resolved UI defects and production issues while maintaining existing functionality and code quality.

Verizon: - Telecom & E-commerce

- Developed reusable React.js components for product listing pages, displaying product images, pricing, categories, and product information.
- Implemented product search, filtering, and sorting functionality to help users find products based on their preferences.
- Developed product detail views and Add to Cart functionality, enabling users to explore products and manage selected items.
- Created responsive UI layouts and reusable navigation components to improve the shopping experience across desktop, tablet, and mobile devices.

Owens Corning: - Building Materials / Construction

- Developed and maintained responsive React.js UI components for the Owens Corning business website, presenting product categories such as Roofing, Insulation, and Doors.
- Implemented responsive page layouts featuring product images, descriptions, navigation links, and interactive buttons
- Used HTML5, CSS3, JavaScript, and React.js to maintain page layouts and ensure a consistent user experience across screen sizes.
- Troubleshot frontend issues, fixed UI defects, and maintained reusable components to improve code quality and maintainability.

Vizient: Healthcare

- Developed data-driven dashboards and patient record interfaces using React.js
- Enhanced performance with UI virtualization for large datasets and skeleton loaders for better UX.
- Implemented patient search, filtering, sorting, and pagination to help users quickly find relevant records.
